General Explanation Each table shows a list of monsters on the left column and the line at the bottom. These monsters are presented in their representation of portraits. If you are not sure which monster is a given portrait is, hover over the image in the work area or simply touch to go to the main page of that monster. If you choose a monster of a column at the bottom, and go up for the monster line you plan to reproduce, the calamari where the two interm will show the possible resulting monster. If the calama is empty, the reproduction combination is said to be "instiable", and the first or second monster will result from the attempt to play. Likewise, if you are trying to create a specific monster, just find a calama that has this monster. If there is more than one, the calama with a yellow sketch will be for the combination that, in your mother's most reproductive attempts. If you are creating two monsters and getting a play time, but you are not sure which monster is, check the havens listed in the calamari or parent monsters on the left column or consult The reproduction page. The tables still show similar groups on each island, rare combinations of single element reproduction, seasonal monsters and peaks, as well as the elements for each monster to help show why certain combinations are combined To potentially make a new monster. Reproduction Notes and Tips See the pages of play structure and play for details about the playback process. The following are some key points to keep in mind: no matter what monster is left vs the right side of the reproduction structure. Get improved reproduction structures as soon as you can comfortably - the 25% reduction in time is worth, especially if very active in the game. You can easily fit into more reproduction a day than you would normally be able to, especially in the case of monsters with 3 or more hours of reproduction time. Rare monsters, peaks and seasonal are available only during specific events. Out of these events, it is said that the combination of reproduction is "instiable"; This will not produce any monsters different from the two parent monsters. Epics can not be used à € à €
