Installation Guide 1 Westminster 8 notes 2 DingDong Repeat 3 Telephone Ring 4 Circus Theme Melody Selection On selected Models The Melody selector is located inside the push converter unit, a small switch on the top left corner of battery compartment marked with "S". Press the switch once, the melody will change to the next one on the list, there are a total of 8 melodies for selection. The converter is preset to "Westminster" therefore, if no change is required, it should not be adjusted. 5 Banjo on my knee 6 T winkle, T winkle 7 It's a small world 8 Dog Barking 1. Drill hole and fit wall plug if fixing to masonry and screw selftapping N3 x 16mm screw to fixing position. Leave a gap of 3mm between the screw head and the wall. Locate the keyhole slot on the back of the unit, over the screw. Important Mounting the Converter unit on metal or UPVC doorframes will seriously reduce the operating range. 2. Then use the second hole located at the bottom half of the Converter as a template, mark the fixing position for the unit. <http://advantagelic.com/singhania/downloads/dell-std2401lw-manual.xml>

Drill hole and fit wall plug and secure the Converter Unit with the screw selftapping N3 x 16mm screw in position. 3. Alternatively, use the doublesided selfadhesive pad included to attach the converter to the fixing position between the bell push and door chime unit. Note When mounting to masonry, fit wall plugs. When mounting to wooden doorframe wall plugs are not necessary. Important Do not connect the Converter unit with any Lighted Bell Push. Operation When the wired Bell Push is pressed, it will activate the Converter and transmit a wireless signal for 1 second to the Wireless Door Chime, Green LED light will light up as operation indication, and the door chime will sound. Important 1. Do not mount the Converter unit onto any metal surface or metal doorframe including UPVC. 2. Do not expose the unit directly to rain or immerse either in water. 3. Do not expose the unit to high temperatures or close to fireplace. 4. Do not leave exhausted batteries in either unit. 5. Do not connect the Converter unit with any Lighting Bell Push. 6. Converter is designed for internal use only. 7. Please dispose of old, defective batteries in an environmentally friendly manner in accordance with the relevant legislation. 8. Make sure that no naked flame sources, such as lighted candles, should be placed on the unit. 9. The unit should not be exposed to dripping or splashing and that no objects filled with liquids. 10. Replace only with the same or equivalent type battery recommended by the manufacturer. However, should your door chime activate intermittently for no reason at all, it is possible that a similar unit is operating nearby on the same frequency. EACH Wired chime can be wired differently, so if you encounter problems, PLEASE CALL THE HELPLINE ON 0121 5449499 Wiring Installation The Converter is designed to change your existing Wired Bell Push to wirefree.

Depending on the model, the list of possible sounds is adjusted. Please tell me when you have a Byron SX device that is not listed here. Installation. Install the app and add the App to a flow. You can use the generic Byron SX application as a starting trigger, or as an action in a flow. In that case you are required to manually fill in the

bellid that is used. Activity. This is a number between 0 and 255. This is a number between 1 and 8. These are the numbers that are listed in the manual that comes with the device. Some bells only support 4 melodies. This is a number between 0 and 15. But only 8 specific values seem to in use. This number can be changed by pushing the small button that is inside the push button. When the card is added to the action column, it is able to send a signal to a Byron SX bell. There are separate cards for each category of bell. There are 6 categories. A 7th card is available, which allows all 16 melody IDs. The hint icon shows the exact models that are supported by that card. But you can also pick the card that has the list of ringtones that matches your Byron SX bell. You can select the melody from a dropdown list. When you select the proper card, the list of melodies should exactly match with what is possible. You can select the melody by its internal number. Not that the internal numbers are not equal to the sequence number suggested by the dropdown lists. You may create more complicated scenarios where you let the Homey flow decide whether or not to send a command to the bell.

First pair be bell so that it has a known internal ID. Then remove the batteries from the push button and reinsert them. This gives the push button a new random internal ID. Unless you are unlucky, the push button now has a different internal ID than the bell. You can use this to let your Homey decide whether the bell should indeed ring. Protocols. The Byron SX series push buttons and bells all use the same 433MHz based protocol. It uses a simple message consisting of 8 bits for the push button identification and 4 bits for the melody identification. This would suggest 256 possible IDs and 16 possible ringtones. Depending on the models of your push button and bell, less combinations may be in use. Discussion and issues. Please report issues via GitHub. Even though they're less complicated to install than their wired counterparts, wireless doorbells have their own set of issues that can cause them to fail. Change your security code on the wireless doorbell and doorbell button if it chimes on its own. A wireless doorbell made by the same manufacturer installed in your neighbor's home could activate your doorbell chime. Remove the push button from the exterior wall. Use a small flathead screwdriver to remove the button cover and expose the circuit board. Dry the interior of the push button with a paper towel. Any moisture inside the doorbell button could cause ghost chiming. Verify that the security codes on the push button and wireless doorbell match. If one of the codes was changed accidentally, the transmitter cannot signal the doorbell to chime. Check the batteries inside the button and doorbell to make sure they're fresh. Without fresh batteries, the button or doorbell won't have the power to chime. Old batteries can also corrode the connections and damage the button or doorbell. Move the doorbell closer to the button. Too much distance between the transmitter and receiver can cause the chime to fail. Check the location of the door chime and button. Attaching either unit to metal can interfere with the transmitter and receiver. Concrete can also interfere with the signals. Install the doorbell and the button on small pieces of wood to improve the reception.
